

## **BusinessVision Version 7.03 Update**

This update release includes all of the fixes supplied in previous updates.

Note – program libraries and some report files are replaced by this update.

The following issues are corrected by this update:

- Sales Order and Purchase Order totals did not include freight after leaving focus in the grid on an order quantity or price, clicking on the freight field, and immediately clicking the save button.
- Sales Orders for customers with many ship to addresses loaded slowly in Order Entry.
- The serial number input field did not automatically highlight the last serial number entered.
- The Inventory Activity Log report ran slowly when multiple warehouses were in use, and the last warehouse was selected. (Note – this did not require a change to the report file).
